Chettiyappanur, Vaniyambadi , Tirupattur , Tamil Nadu- 635751

**DEPARTMENT OF ARTIFICIAL INTELLIGENCE AND DATA SCIENCE**

## **SUMMER INTERNSHIP REPORT**

Name : **Prithviraj R.**

Register Number : **511924243037**

Department : **B.Tech AI & DS**

Year : **Third Year (Fifth semester)**

Company Name : **8 Queens Software Technologies Pvt. Ltd.**

Company Address : **No. 48, Venkatakrishna Road, 2nd Floor,  
Mandaveli, Chennai – 600028.**

Internship Duration : **Four Weeks**

## INTRODUCTION:

- I successfully completed a **four-week Summer Internship at 8 Queens Software Technologies Pvt. Ltd., Chennai**. The internship provided practical exposure to Database Management Systems (DBMS), SQL, NoSQL, MySQL, Python Programming, NumPy, Pandas, Matplotlib, Seaborn, and Microsoft Power BI.
- The internship focused on improving technical knowledge through practical learning sessions and hands-on activities. During the training, I learned how databases are created and managed, how SQL queries are used to retrieve and manipulate data, how Python libraries are used for data analysis, and how Microsoft Power BI is used to create interactive dashboards and data visualizations.
- The internship also enhanced my analytical thinking, problem-solving ability, programming skills, and understanding of real-world software development practices.

## SQL (Structured Query Language) :

- **Structured Query Language (SQL)** is the standard language used to communicate with relational databases. It is used to create databases, create tables, insert records, retrieve data, update existing records, and delete unwanted data. SQL plays an important role in database management and is widely used in software development.
- During the internship, I learned the fundamentals of Database Management Systems (DBMS), SQL, NoSQL, and MySQL. Practical sessions included creating databases, designing tables, applying constraints such as **Primary Key, Foreign Key, UNIQUE, NOT NULL, CHECK, and AUTO\_INCREMENT**, and managing relational databases using MySQL.
- I also learned SQL operations such as **SELECT, INSERT, UPDATE, DELETE, WHERE, ORDER BY, GROUP BY, HAVING, and JOIN operations**. These concepts helped me understand how data can be stored, organized, retrieved, filtered, and analyzed efficiently in relational databases.

### Learning Outcome :

- This task helped me gain practical knowledge of database management, SQL query execution, CRUD operations, database relationships, and efficient data retrieval using MySQL.

## PYTHON:

- **Python** is a simple and powerful programming language widely used in Artificial Intelligence, Machine Learning, Data Science, Web Development, and Automation. It is easy to learn and provides numerous libraries for solving real-world problems.
- During the internship, I learned the basics of Python programming, including variables, data types, operators, conditional statements, loops, functions, and input/output operations.
- I also gained practical knowledge of popular Python libraries such as **NumPy, Pandas, Matplotlib, and Seaborn**. NumPy is used for numerical computations, Pandas is used for data manipulation and analysis, Matplotlib is used for creating charts and graphs, and Seaborn is used for advanced statistical data visualization.

#### **Learning Outcome :**

- This training improved my programming skills and provided practical experience in data analysis, data manipulation, and data visualization using Python and its libraries.

### **MICROSOFT POWER BI :**

- **Microsoft Power BI** is a **Business Intelligence and Data Visualization tool developed by Microsoft**. It helps users convert raw data into meaningful insights through interactive reports and dashboards.
- During the internship, I worked with the **Amazon Prime Video** dataset using Microsoft Power BI. The dataset contained information about **movies and television shows, including genres, release year, ratings, duration, country, directors, and content type**.
- The dataset was cleaned by checking missing values, verifying data types, and preparing the data for analysis. Various **visualizations** such as **bar charts, pie charts, column charts, line charts, cards, and slicers** were created to analyze different aspects of the dataset.
- The dashboard provided valuable insights into **content distribution, genre analysis, release year trends, ratings, and country-wise content availability**.

#### **Learning Outcome :**

- This task helped me understand data cleaning, dashboard creation, interactive reporting, and business intelligence using Microsoft Power BI.

### Amazon Prime Video Dashboard :

### Summer Internship certificate:

### CONCLUSION:

- The four-week Summer Internship at 8 Queens Software Technologies Pvt. Ltd. was a valuable learning experience that helped me bridge the gap between theoretical knowledge and practical application. Throughout the internship, I gained hands-on experience in Database Management Systems (DBMS), SQL, MySQL, Python Programming, NumPy, Pandas, Matplotlib, Seaborn, and Microsoft Power BI.
- The internship improved my technical knowledge, programming skills, analytical thinking, problem-solving ability, and understanding of real-world software development practices. The practical sessions helped me understand how databases are managed, how data is analyzed, and how business insights are generated using modern technologies.
- Overall, this internship strengthened my confidence and prepared me for future academic projects, internships, and a successful career in Artificial Intelligence and Data Science. I sincerely thank 8 Queens Software Technologies Pvt. Ltd. and Priyadarshini Engineering College for providing me with this valuable opportunity.
